

Terraform Cloud Workflows

How Your Team Works

Terraform Cloud can be used as a part of your team's existing workflows, or you can evolve your team workflows to take advantage of Terraform Cloud features.

- Manual: Queue runs on demand
- Semi-auto: plan runs on VCS commit
- Continuous Infrastructure: apply on VCS commit

Types of Workflows

Command Line
(CLI)

Version Control Software
(VCS)

API

Terraform CLI Workflow

- Terraform Cloud's default Workflow
- Most familiar workflow for users who are already using Terraform OSS
- Brings Terraform Cloud's collaboration features into the familiar Terraform CLI workflow.

Terraform CLI Workflow

Cloud
Engineer

```
$ terraform plan  
$ terraform apply
```

State Stored
in TFC / Both Local &
Remote Executions
Supported

Cloud
Resources

Terraform CLI Workflow

```
cloud.tf

# Terraform 1.1 and Later

terraform {
  cloud {
    hostname      = "app.terraform.io"
    organization  = "my-organization"
    workspaces {
      name = "bagapp-web-aws-prod"
    }
  }
}
```

Version Control Workflow

Code is now stored in a Repository

VCS Connections:

- GitHub, GitLab, BitBucket, Azure DevOps
- SSH Keys

Everything goes through Version Control now

- Developer commits code
- Gets commit hash in GitHub
- Triggers a Terraform run

Version Control Workflow

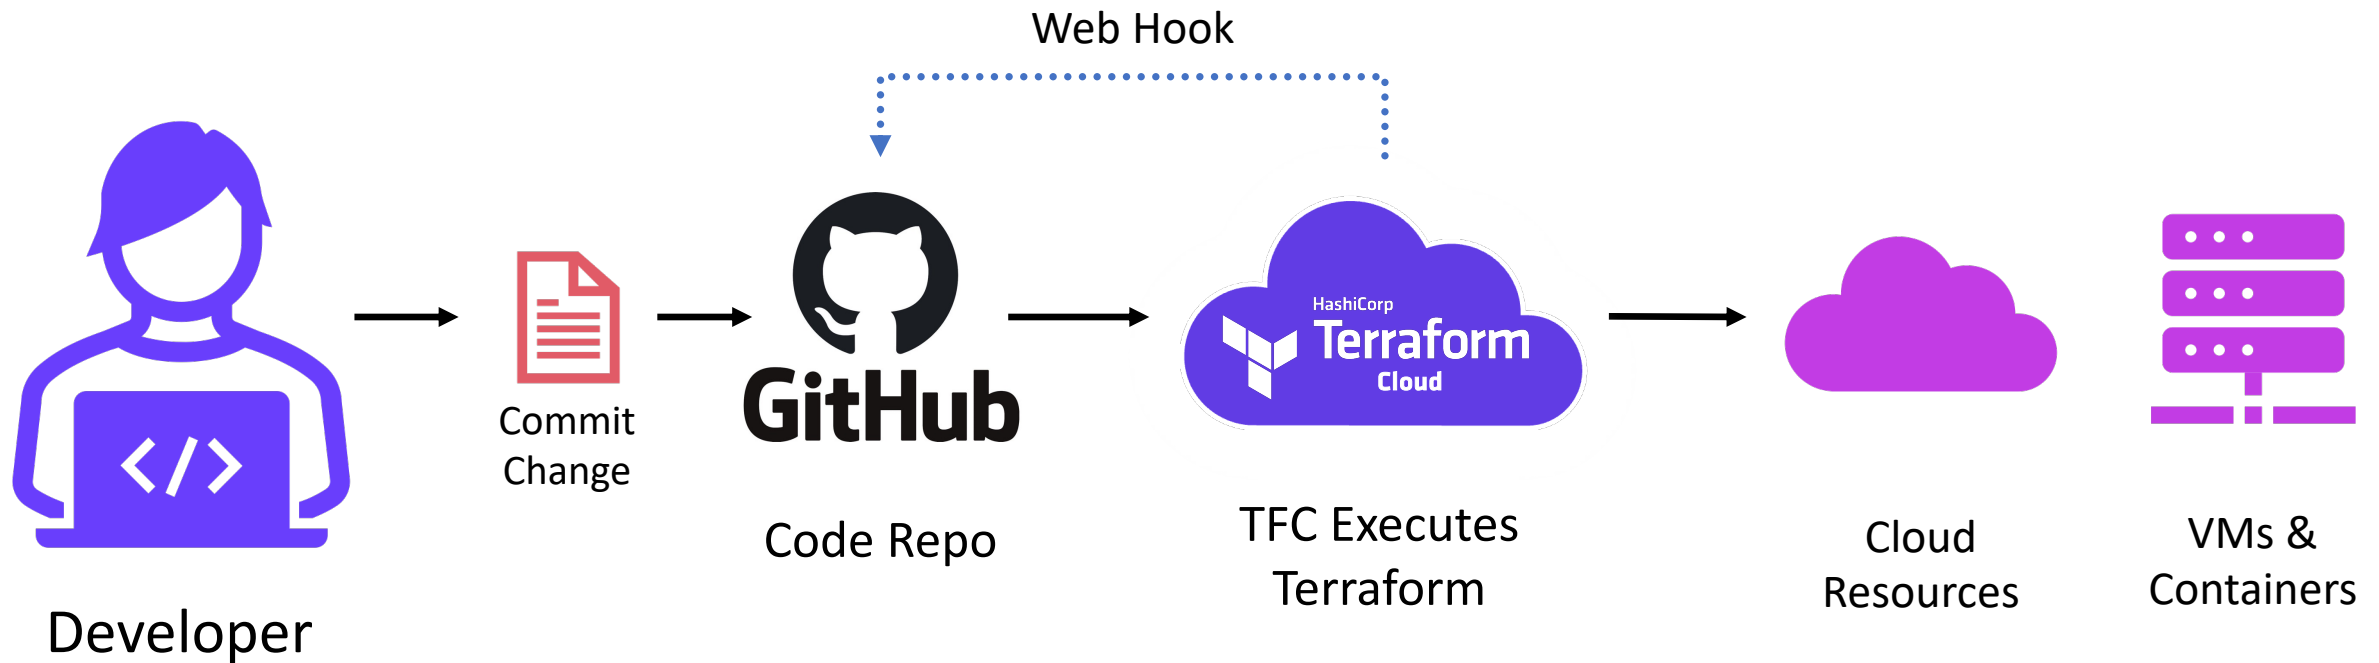

Terraform Runs are integrated with Git operations:

- VCS Branch
- Working Directory

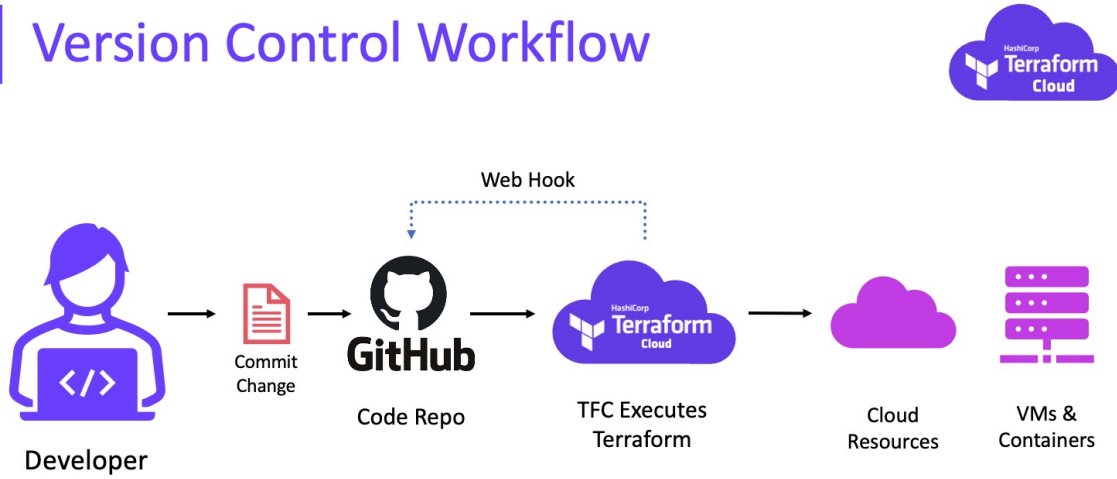

Dev workspaces are now listening for commits on your dev repo

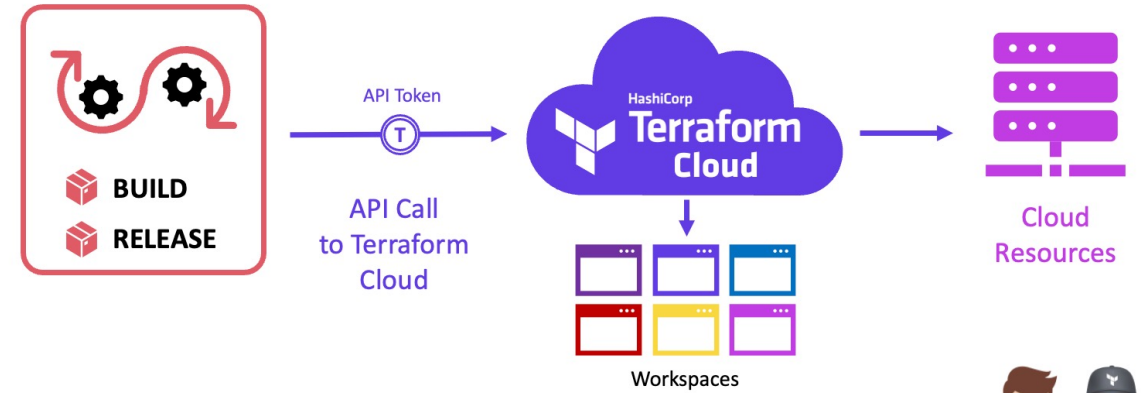

Version Control Workflow
